

Amendments to the Specification:

Please amend the specification as follows:

Page 15, paragraph 0050, please replace with the following paragraph:

[0050]

At an end portion of the guide case 32 on the downstream side, the accumulating case 4 is arranged in close proximity. The accumulating case 4 is, as shown in FIG. 7, formed in a rectangular shape having substantially the same length in a longitudinal direction as that of the corrugated fins C1 and C2, and a rotating shaft [[8]] 9 is provided at the center portion therein.

Page 16, paragraph 0053, please replace with the following paragraph:

[0053]

When six corrugated fins C are accommodated in the accumulating rooms 4a to 4f, a not-
shown electric motor rotates the rotating shaft [[8]] 9 in a circumferential direction denoted
by an arrow AM by 90 degrees, so that the corrugated fins C1 and C2 can be accommodated
in sequence in the respective accumulating rooms 4a to 4f on the four faces of the
accumulating case 4.

Page 22, paragraph 0076, please replace with the following paragraph:

[0076]

Then, when a total of six of the corrugated fins C1 and C2 are accommodated into the
accumulating rooms 4a to 4f, the corrugated fins C1 and C2 are accommodated in sequence
into accumulating rooms 4a to 4f on another face of the accumulating case 4 while rotating
the accumulating case 4 by 90 degrees in a circumferential direction of the center axis [[8]] of
rotating shaft 9.
